

Sewer Pump Stations

A photograph of a sewer pump station. The station is a large, rectangular concrete structure with a metal fence around it. Two workers in light-colored shirts and dark pants are standing near the fence, looking towards the station. The background shows trees and a cloudy sky.

The City of *Gulfport* Department of Public Works & OPTECH maintain 141 sewer pump stations transporting approximately 10 million gallons of waste water per day to local treatment plants for processing. Stations ranging in size from Single 1 Horse Power pumps to multiple 169 Horse Power pumps are vital in maintaining environmental quality throughout the city.
